THINK BEFORE YOU POST: THE IMPACT OF SHARING PHOTOS AND VIDEOS

ISSUE 3

SHARING PHOTOS AND VIDEOS

Today, being a 'content creator' through platforms such as YouTube, Twitch, TikTok and Instagram is what children aspire to do. Children of an increasingly young age are asking to make their first videos and upload them to sites.

It is important to remember that these sites have age restrictions in place for good reason. Without taking precautions, there's no way to control who can see your content. Most social media apps, like TikTok and Instagram, have privacy settings that allow for greater control on who can see the uploaded content.

ONLINE SAFETY HUB – YOUTUBE AND QUSTODIO

Qustodio is a tool that allows for parental controls over a child's internet use.

Qustodio works well with YouTube, allowing for control over:

- The type of content your child sees
- When they can browse
- Blocking your child from signing in with an adult account
- Much more!

APP SPOTLIGHT - YOUTUBE

This week's app spotlight is YouTube.

YouTube is the world's most popular video-sharing platform. With more children accessing it, it's important to understand how to them keep safe.

- **Make sure your child has a child profile.**
- **Choose *YouTube Kids* over regular YouTube for children aged 13 to as young as 2.**
